Discover...

...how singing can improve your health and wellbeing with *The Musical Brain*. Join in and explore with scientists and musicians how Neanderthals used their voices to navigate caves, how the voice evolved, how it works, exciting modern voice recording technology, and how group singing can make you and others happy.

Led by three distinguished experts:

Professor Steven Mithen, author of *The Singing Neanderthals*, Deputy Vice Chancellor and Dean of the Faculty of Science, Reading University, on the evolution of the human voice and singing.

Dr Evangelos Himonides, reader in Technology, Education and Music at University College London Institute of Education, on the voice, how it works, its function and uniqueness.

Vivien Ellis, singer and researcher (Sidney de Haan Research Centre for Arts and Health), who will use singing, movement and body percussion in her interactive presentation on singing and health.
